## 1 General

|                                     |                        |  |
|-------------------------------------|------------------------|--|
| Fan type                            | Fan                    |  |
| Rotating direction looking at rotor | Clockwise              |  |
| Airflow direction                   | Air outlet over struts |  |
| Bearing system                      | Ball bearing           |  |
| Mounting position - shaft           | Any                    |  |

## 2 Mechanics

### 2.1 General

|                                                       |                                                                         |  |
|-------------------------------------------------------|-------------------------------------------------------------------------|--|
| Width                                                 | 119,0 mm                                                                |  |
| Height                                                | 119,0 mm                                                                |  |
| Depth                                                 | 32 mm                                                                   |  |
| Mass                                                  | 0,23 kg                                                                 |  |
| Housing material                                      | Plastic                                                                 |  |
| Impeller material                                     | Plastic                                                                 |  |
| Max. torque when mounted across both mounting flanges | Wire outlet corner: 80 Ncm<br>Remaining corners: 80 Ncm                 |  |
| Screw size                                            | ISO 4762 - M4 degreased, without an additional brace and without washer |  |
| Rotor protrusion max.                                 | 0,4 mm                                                                  |  |

### 2.2 Connections

|                       |             |  |
|-----------------------|-------------|--|
| Electrical connection | Wires       |  |
| Lead wire length      | L = 310 mm  |  |
| Tolerance             | +/- 10,0 mm |  |
| Wire size (AWG)       | 24          |  |
| Insulation diameter   | 1,1 mm      |  |

| Wire | Color  | Operation |
|------|--------|-----------|
| 1    | red    | + UB      |
| 2    | blue   | - GND     |
| 3    | violet | NTC       |
| 4    | white  | Alarm     |

The auxiliaries shown on the schematic diagram (which are required for the intended use) are not part of our delivery.

### 3 Operating Data

#### 3.1 Electrical Interface - Input

|               |                             |
|---------------|-----------------------------|
| Control input | External Temperature Sensor |
|---------------|-----------------------------|

#### Features

| Schematics                                     |  <p>The schematic diagram illustrates the electrical connection between the fan and the customer. On the left, the fan (Lüfter / Fan) is shown with its internal components. On the right, the customer's (Kunde / Customer) input (Eingang / Input) is shown. The fan's control input is connected to the customer's input. The customer's input is connected to + UB (positive supply voltage) and - GND (ground). An internal reference (+ Interne Ref. / + Internal ref.) is connected to the fan's control input. An NTC (Negative Temperature Coefficient) thermistor is connected to the customer's input and - GND.</p> |                                                |                          |   |      |    |      |    |      |    |      |    |      |    |      |    |      |    |      |    |      |

### 3.2 Electrical Operating Data

Measurement conditions: Normal air density = 1,2 kg/m<sup>3</sup>; Temperature 23°C +/- 3°C; Motor axis horizontal; warm-up time before measuring 5 minutes (unless otherwise specified). In the intake and outlet area should not be any solid obstruction within 0,5 m.

$\Delta p = 0$ : corresp. to free air flow (see chapter aerodynamics)

I: corresp. to arithm. mean current value

| Name     | Condition      |  |  |
|----------|----------------|--|--|
| TU 0001  |                |  |  |
| NTC 0001 | NTC <= 33 kOhm |  |  |

### 3.3 Electrical Interface - Output

|            |                                 |
|------------|---------------------------------|
| Alarm type | /17 (high = ok, open collector) |
|------------|---------------------------------|

$$R_a = \frac{U_{BA} - U_{A \text{ low}}}{I_{\text{sink}}}$$

Lüfter / Fan      Kunde / Customer

- 1) Wenn der Lüfter abgeschaltet ist, hängt der Zustand des Ausgangssignals  $U_A$  von der Kundenapplikation ab.  
*When the fan is powered off, the output signal  $U_A$  depends on the customer's application.*
- 2) Für den gültigen Zustand (a oder b) siehe Alarmunterdrückung in der Tabelle.  
*For the valid condition (a or b) see alarm suppression in the table.*

| Alarm isolated from motor         | No                                                                                    |                       |

### 3.4 Electrical Features

|                                |                                   |  |
|--------------------------------|-----------------------------------|--|
| Electronic function            | Speed-Controlled                  |  |
| Reversed polarity protection   | Rectifying diode                  |  |
| Max. residual current at $U_N$ | $I_F < 100 \mu A$                 |  |
| Locked rotor protection        | Auto restart                      |  |
| Locked rotor current at $U_N$  | $I_{block}$ approx. 1.300 mA      |  |
| Clock signal at locked rotor   | $t_3 / t_4$ typical: 0,5 s / 10 s |  |

### 3.5 Aerodynamics

Measurement conditions:

Measured with a double chamber intake rig acc. to DIN EN ISO 5801.

Normal air density = 1,2 kg/m<sup>3</sup>; Temperature 23°C +/- 3°C;

In the intake and outlet area should not be any solid obstruction within 0,5 m. Motor shaft horizontal.

The information is only valid under the specified test conditions and may be changed by the installation conditions. If there are deviations from the standard test conditions, the characteristic values must be checked under the installed conditions. Power consumption of the fan motor when operating at normal voltage is shown. Depending on the operating conditions of the application, the power input may be higher.

a.) Operation condition:

|                              |                |  |  |
|------------------------------|----------------|--|--|
| 2.700 1/min at free air flow | NTC <= 33 kOhm |  |  |
|------------------------------|----------------|--|--|

|                                                                   |                       |  |
|-------------------------------------------------------------------|-----------------------|--|
| Max. free-air flow ( $\Delta p = 0$ / $\dot{V} = \text{max.}$ )   | 187 m <sup>3</sup> /h |  |
| Max. static pressure ( $\Delta p = \text{max.}$ / $\dot{V} = 0$ ) | 66 Pa                 |  |

### 3.6 Sound Data

Measurement conditions: Sound pressure level: 1 meter distance between microphone and the air intake.  
 Sound power level: Acc. to DIN 45635 part 38 (ISO 10302)  
 Measured in a semianchoic chamber with a background noise level of  $L_p(A) < 5 \text{ dB(A)}$   
 For further measurement conditions see chapter aerodynamics.

a.) Operation condition:

|                              |                            |  |  |
|------------------------------|----------------------------|--|--|
| 2.700 1/min at free air flow | NTC $\leq 33 \text{ kOhm}$ |  |  |
|------------------------------|----------------------------|--|--|

|                                                                 |                               |  |
|-----------------------------------------------------------------|-------------------------------|--|
| Optimal operating point                                         | 138 m <sup>3</sup> /h @ 22 Pa |  |
| Sound power level at the optimal operating point                | 5,4 bel(A)                    |  |
| Sound pressure level at free air flow, measured in rubber bands | 43 dB(A)                      |  |

## 4 Environment

### 4.1 General

|                                            |        |  |
|--------------------------------------------|--------|--|
| Min. permitted ambient temperature TU min. | -20 °C |  |
| Max. permitted ambient temperature TU max. | 70 °C  |  |
| Min. permitted storage temperature TL min. | -40 °C |  |
| Max. permitted storage temperature TL max. | 80 °C  |  |

### 4.2 Climatic Requirements

|                       |                                                               |  |
|-----------------------|---------------------------------------------------------------|--|
| Humidity requirements | humid heat, constant; according to DIN EN 60068-2-78, 14 days |  |
| Water exposure        | None                                                          |  |
| Dust requirements     | None                                                          |  |
| Salt fog requirements | None                                                          |  |

Permitted application area:

The product is intended for use in sheltered rooms with controlled temperature and controlled humidity. Directly exposure to water must be avoided.

Pollution degree 1 (according DIN EN 60664-1)

There is either no pollution or it occurs only dry, non-conductive pollution. The pollution has no negative impact.

### 4.3 Mechanical Requirements

| severity level | Vibration (sinusoidal)                                                                                                                           |                                                                                                  |
|----------------|--------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------|
