

R74 Series 125°C Single Metallized Polypropylene Film, Radial, AC Applications (Automotive Grade)

Overview

The R74 Series 125°C is constructed of metallized polypropylene film with radial leads of tinned wire. The radial leads are electrically welded to the metal layer on the ends of the capacitor winding. The capacitor is encapsulated in a self-extinguishing solvent resistant plastic case with thermosetting resin material meeting the UL 94V-0 requirements. Two different winding constructions are used depending on voltage parameters. Please see the Performance Characteristics for more information.

Automotive grade devices are available and meet the demanding Automotive Electronics Council's AEC-Q200 qualification requirements.

Applications

Typical applications include electronic lighting such as automotive headlamps and ballasts, as well as pulse applications with high AC voltage and high current. Not suitable for across-the-line application (see Suppressor Capacitors).

Benefits

- Voltage range: 500 – 700 VAC
- Capacitance range: 470 pF – 0.018 μ F
- Lead Spacing: 10.0 – 22.5 mm
- Capacitance tolerance: \pm 5%, \pm 10%
- Climatic category: 55/125/56 IEC 60068-1
- Operating temperature range of -55°C to +125°C
- RoHS compliance and lead-free terminations
- Tape and reel packaging in accordance with IEC 60286-2
- Self-healing
- Automotive (AEC-Q200) grades available

Part Number System

R74	5	F	1100	AA	H	0	J
Series	Rated Voltage (VAC)	Lead Spacing (mm)	Capacitance Code (pF)	Lead and Packaging Code	Dimensions and Electrical Characteristics	Internal Use	Capacitance Tolerance
Metallized Polypropylene	5 = 500 7 = 700	F = 10.0 I = 15.0 N = 22.5	Digits 2 – 4 indicate the first three digits of the capacitance value. First digit indicates the number of zeros to be added.	See Ordering Options Table	H = 125°C	0 (Standard)	J = \pm 5% K = \pm 10%

Performance Characteristics

Dielectric	Polypropylene film			
Plates	Metal layer deposited by evaporation under vacuum			
Winding	Non-inductive type			
Leads	Tinned wire			
Protection	Plastic case, thermosetting resin filled. Box material is solvent resistant and flame retardant according to UL94.			
Related Documents	IEC 60384-16, IEC 60384-17			
Sections	2	3		
Voltage Range (VAC)	500	700		
Voltage Range (VDC)	1600	2000		
Capacitance Range (μF)	0.001 – 0.1	0.00068 – 0.068		
Capacitance Values	E12 series (IEC 60063) measured @ 1 kHz and +20 ±1°C			
Capacitance Tolerance	±5%, ±10%			
Category Temperature Range	-55°C to +125°C			
Rated Temperature T _R	+105°C			
Voltage Derating	Above +105°C DC and AC voltage derating is 1.25%/°C			
Climatic Category	55/125/56 IEC 60068-1			
	Average relative humidity ≤ 75%			
	RH = 95% for 30 days per year			
	RH = 85% for further days limited by average value per year			
Test Voltage	1.6 x V _R VDC for 2 seconds (between terminations) @ +25°C ±5°C			
Capacitance Drift	Maximum 1% after a 2 year storage period at a temperature of +10°C to +40°C and a relative humidity of 40% to 60%			
Maximum Pulse Steepness	dV/dt according to Table 1. For peak to peak voltages lower than rated voltage (V _{pp} <V _R), the specified dv/dt can be multiplied by the factor V _R /V _{pp}			
Temperature Coefficient	-(200 ±100) ppm/°C at 1 kHz			
Self Inductance (Lead Length ~ 2 mm)	Lead Spacing (mm)	10	15	22.5
	L (nH) ≈	9	10	18
	Maximum 1 nH per 1 mm lead and capacitor length.			
Dissipation Factor tanδ	Measured at 25°C ± 5°C			
	Frequency	C ≤ 2.2 nF	2.2 nF < C ≤ 0.027 μF	0.027 μF < C ≤ 0.1 μF
	1 kHz	0.01%	0.01%	0.04%
	10 kHz	0.02%	0.02%	0.06%
	100 kHz	0.03%	0.08%	0.25%

Insulation Resistance	Measured @ +25°C ±5°C, 100 VDC 60 seconds
	Minimum Values Between Terminals
	All Capacitance Values
	≥ 100,000 MΩ

Qualification

Automotive Grade products meet or exceed the requirements outlined by the Automotive Electronics Council. Details regarding test methods and conditions are referenced in document AEC-Q200, Stress Test Qualification for Passive Components. For additional information regarding the Automotive Electronics Council and AEC-Q200, please visit their website at www.aecouncil.com.

Maximum Voltage (V_{rms}) vs. Frequency (Sinusoidal Waveform/ $Th \leq 85^\circ C$)

Maximum Current (I_{rms}) vs. Frequency (Sinusoidal Waveform/ $Th \leq 85^\circ C$)

Environmental Test Data

Damp Heat, Steady State Test	Test Conditions:		Performances
	Temperature:	+40°C ±2°C	$ \Delta C/C \leq 2\%$, $\Delta \tan\delta \leq 0.001 @ 1 \text{ kHz}$ IR after test $\geq 50\%$ of initial limit
	Relative humidity (RH):	93% ±2%	
	Test duration:	56 days	
Endurance Test	Test Conditions		Performances
Test 1st	Temperature:	+125°C +0/-2°C	$ \Delta C/C \leq 5\%$, $\Delta \tan\delta \leq 0.0015 @ 1 \text{ kHz}$ IR after test $\geq 50\%$ of initial limit
	Voltage applied:	0.94 x V _R (AC) @ 50Hz	
	Test duration:	2,000 hours	
Test 2nd	Temperature:	+105°C ±2°C	
	Voltage applied:	1.25 x V _R (AC) @ 50Hz	
	Test duration:	2,000 hours	
Resistance to Soldering Heat Test	Test Conditions		Performances
	Solder bath temperature:	260°C ±5°C	$ \Delta C/C \leq 1\%$, $\Delta \tan\delta \leq 0.001 @ 1 \text{ kHz}$ IR after test \geq initial limit
	Dipping time (with heat screen):	10 seconds ±1 second	

Environmental Compliance

All KEMET pulse capacitors are RoHS Compliant.

RoHS Compliant

Soldering Process

The implementation of the RoHS directive has resulted in the selection of SnAgCu (SAC) alloys or SnCu alloys as primary solder. This has increased the liquidus temperature from that of 183°C for SnPb eutectic alloy to 217 – 221°C for the new alloys. As a result, the heat stress to the components, even in wave soldering, has increased considerably due to higher pre-heat and wave temperatures. Polypropylene capacitors are especially sensitive to heat (the melting point of polypropylene is 160 – 170°C). Wave soldering can be destructive, especially for mechanically small polypropylene capacitors (with lead spacing of 5 mm to 15 mm), and great care has to be taken during soldering. The recommended solder profiles from KEMET should be used. Please consult KEMET with any questions. In general, the wave soldering curve from IEC Publication 61760-1 Edition 2 serves as a solid guideline for successful soldering. Please see Figure 1.

Reflow soldering is not recommended for through-hole film capacitors. Exposing capacitors to a soldering profile in excess of the above the recommended limits may result to degradation or permanent damage to the capacitors.

Do not place the polypropylene capacitor through an adhesive curing oven to cure resin for surface mount components. Insert through-hole parts after the curing of surface mount parts. Consult KEMET to discuss the actual temperature profile in the oven, if through-hole components must pass through the adhesive curing process. A maximum two soldering cycles is recommended. Please allow time for the capacitor surface temperature to return to a normal temperature before the second soldering cycle.

Figure 1

Dielectric Film Material	Maximum Preheat Temperature			Maximum Peak Soldering Temperature	
	Capacitor Lead Spacing <10 mm	Capacitor Lead Spacing = 15 mm	Capacitor Lead Spacing >15 mm	Capacitor Lead Spacing <15 mm	Capacitor Lead Spacing >15 mm
Polyester	130°C	130°C	130°C	270°C	270°C
Polypropylene	100°C	110°C	130°C	260°C	270°C
Polyphenylene Sulphide	150°C	150°C	160°C	270°C	270°C

Wave Soldering Recommendations

Manual Soldering Recommendations

Following is the recommendation for manual soldering with a soldering iron.

The soldering iron tip temperature should be set at 350°C (+10°C maximum) with the soldering duration not to exceed more than 3 seconds.

Soldering Process cont'd

Selective Soldering Recommendations

Selective dip soldering is a variation of reflow soldering. In this method, the printed circuit board with through-hole components to be soldered is preheated and transported over the solder bath as in normal flow soldering without touching the solder. When the board is over the bath, it is stopped and pre-designed solder pots are lifted from the bath with molten solder only at the places of the selected components, and pressed against the lower surface of the board to solder the components.

The temperature profile for selective soldering is similar to the double wave flow soldering outlined in this document, **however, instead of two baths, there is only one bath with a time from 3 to 10 seconds.** In selective soldering, the risk of overheating is greater than in double wave flow soldering, and great care must be taken so that the parts are not overheated.

Disclaimer

All product specifications, statements, information and data (collectively, the "Information") in this datasheet are subject to change. The customer is responsible for checking and verifying the extent to which the Information contained in this publication is applicable to an order at the time the order is placed.

All Information given herein is believed to be accurate and reliable, but it is presented without guarantee, warranty, or responsibility of any kind, expressed or implied.

Statements of suitability for certain applications are based on KEMET Electronics Corporation's ("KEMET") knowledge of typical operating conditions for such applications, but are not intended to constitute – and KEMET specifically disclaims – any warranty concerning suitability for a specific customer application or use. The Information is intended for use only by customers who have the requisite experience and capability to determine the correct products for their application. Any technical advice inferred from this Information or otherwise provided by KEMET with reference to the use of KEMET's products is given gratis, and KEMET assumes no obligation or liability for the advice given or results obtained.

Although KEMET designs and manufactures its products to the most stringent quality and safety standards, given the current state of the art, isolated component failures may still occur. Accordingly, customer applications which require a high degree of reliability or safety should employ suitable designs or other safeguards (such as installation of protective circuitry or redundancies) in order to ensure that the failure of an electrical component does not result in a risk of personal injury or property damage.

Although all product-related warnings, cautions and notes must be observed, the customer should not assume that all safety measures are indicated or that other measures may not be required.
