**Remarks**

The potentiometer does not have a fixed stop, but can be turned endlessly without destroying anything.  
 If no change in the switching signal is detected, the potentiometer should be turned forwards or backwards until a signal change occurs at the output.  
 For more information about MTTF and B10d see MTTF / B10d Certificate

Indication of the MTTF- / B10d value does not represent a binding composition and/or life expectancy assurance; these are simply experiential values with no warranty implications. These declared values also do not extend the expiration period for defect claims or affect it in any way.
