TRI-STATE Programmable Binary Counters

These circuits are synchronous, edge-sensitive, fully-programmable 4-bit counters. The counters feature both conventional totem-pole and TRI-STATE outputs; such that when the outputs are in the high impedance mode, they can be used to enter data from the bus lines. In addition, the clear input operates completely independent of all other inputs. During the programming operation, data is loaded into the flip-flops on the positive-going edge of the clock pulse. To facilitate cascading of these counters, the MAX COUNT output can be tied directly into the count enable input of the next counter.

Rochester Electronics Manufactured Components

Rochester branded components are manufactured using either die/wafers purchased from the original suppliers or Rochester wafers recreated from the original IP. All recreations are done with the approval of the OCM.

Parts are tested using original factory test programs or Rochester developed test solutions to guarantee product meets or exceeds the OCM data sheet.

DM7556/DM8556 TRI-STATE® Programmable Binary Counters

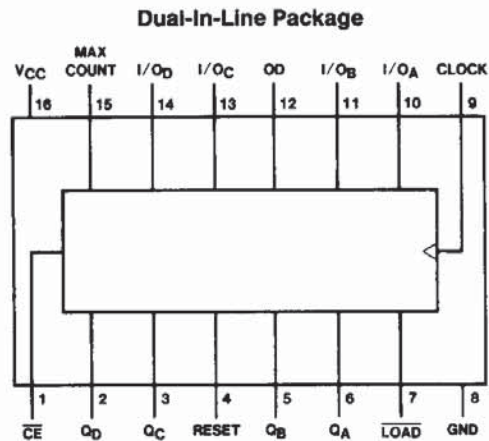

General Description

These circuits are synchronous, edge-sensitive, fully-programmable 4-bit counters. The counters feature both conventional totem-pole and TRI-STATE outputs; such that when the outputs are in the high impedance mode, they can be used to enter data from the bus lines. In addition, the clear input operates completely independent of all other inputs. During the programming operation, data is loaded into the flip-flops on the positive-going edge of the clock pulse. To facilitate cascading of these counters, the MAX COUNT output can be tied directly into the count enable input of the next counter.

Features

- Typical clock frequency 35 MHz
- TRI-STATE outputs
- Fully independent clear
- Synchronous loading
- Cascading circuitry provided internally

Function Table

Control Inputs					I/O Ports				Active Outputs			
LOAD	CE	CLK	OD	Reset	I/O _A	I/O _B	I/O _C	I/O _D	Q _A	Q _B	Q _C	Q _D
H	X	X	L	H	L	L	L	L	L	L	L	L
H	X	X	H	H	Z	Z	Z	Z	L	L	L	L
H	X	L	L	L	Q _{A0}	Q _{B0}	Q _{C0}	Q _{D0}	Q _{A0}	Q _{B0}	Q _{C0}	Q _{D0}
H	X	L	H	L	Z	Z	Z	Z	Q _{A0}	Q _{B0}	Q _{C0}	Q _{D0}
L	H	↑	L	L	a	b	c	d	A	B	C	D
H	L	↑	L	L	COUNT				COUNT			
H	L	↑	H	L	Z	Z	Z	Z	COUNT			

The I/O pins are used as inputs when they are TRI-STATE^d, and the $\overline{\text{LOAD}}$ input is Low. They are outputs and active when $\overline{\text{LOAD}}$ input is High and OD is Low.

H = High Level (Steady State)

L = Low Level (Steady State)

X = Don't Care including transitions

a, b, c, d = The level of the steady state input at inputs A, B, C, D respectively

Q_{A0}, Q_{B0}, Q_{C0}, Q_{D0} = The level of Q_A, Q_B, Q_C, Q_D respectively, before the indicated steady state input conditions were established.

Absolute Maximum Ratings (Note)

Specifications for Military/Aerospace products are not contained in this datasheet. Refer to the associated reliability electrical test specifications document.

Supply Voltage	7V
Input Voltage	5.5V
Operating Free Air Temperature Range	
DM75	−55°C to +125°C
DM85	0°C to +70°C
Storage Temperature Range	−65°C to +150°C

Note: The "Absolute Maximum Ratings" are those values beyond which the safety of the device cannot be guaranteed. The device should not be operated at these limits. The parametric values defined in the "Electrical Characteristics" table are not guaranteed at the absolute maximum ratings. The "Recommended Operating Conditions" table will define the conditions for actual device operation.
