

3.3 V LVDS, 2-Bit, High-Speed, Differential Driver

FIN1027A

General Description

This dual driver is designed for high-speed interconnects utilizing Low Voltage Differential Signaling (LVDS) technology. The driver translates LVTTTL signal levels to LVDS levels with a typical differential output swing of 350 mV, which provides low EMI at ultra-low power dissipation, even at high frequencies. This device is ideal for high-speed transfer of clock or data.

The FIN1027A can be paired with its companion receiver, the FIN1028, or with any other LVDS receiver
