

FX23/FX23L Series

High Speed Transmission, 0.5mm Pitch Board-to-Board Floating Connectors

FunctionMAX™

Power / Signal

High Speed

Floating

Aug. 1. 2024 Copyright 2024 HIROSE ELECTRIC CO., LTD. All Rights Reserved.

Features

1. Pitch: 0.5mm
2. Connection Type:
Stacking (Height 8 to 30mm)/
Right Angle
3. Positions Available:
20/40/60/80/100/120 for signal + 4 pins for power
4. Floating Range
: X Direction: $\pm 0.6\text{mm}$
: Y Direction: $\pm 0.6\text{mm}$

A floating movement above the connector pitch is possible.

Floating Range: $\pm 0.6\text{mm}$ in the X and Y directions

5. Supports PCIe Gen.4 (16Gbps)

Note : Please contact our sales representatives regarding compatibility with other transmission standards

6. Hybrid Power Design (3A/pin×4 lines)

The guide posts on both sides of the connector are equipped with 4 lines of power contacts in addition to signal contacts.

Hybrid Power/Signal Contacts

7. Current Capacity: Signal Contact 0.5A/pin Power Contact 3A/pin

8. Pick & Place (suction tape attached as standard)

9. Large guide post for excellent mating performance

Easy mating operation due to large self-alignment range.

■ Signal Integrity

● ICR (Insertion-loss-to-Crosstalk-Ratio)

The ICR containing cross-talk from 5 adjacent differential pairs provides adequate margin in comparison with the criteria based on the specification of IEEE802.3ap.

● Differential Impedance

Differential impedance is $100 \pm 10 \Omega$ at the rise time of 87.5ps (20 to 80%).

Product Specifications

Rated Current	Signal	Power	Operating Temperature (Note 1)	-55 to +105°C
	0.5A	3A	Storage Temperature Range (Note 2)	-10 to +60°C
Rated Voltage	Signal	Power		
	50V AC	200V AC		

Operating Humidity Range	90% or less relative humidity (No dew condensation)	Storage Humidity Range	90% or less relative humidity (No dew condensation)
--------------------------	---	------------------------	---

Items	Specifications	Conditions
Contact Resistance	Signal : 70m Ω Max. Power : 20m Ω Max.	Measured at 100mA
Insulation Resistance	Signal : 100M Ω Max. Power : 1,000M Ω Max.	Signal : Measured at 100V DC Power : Measured at 250V DC
Withstanding Voltage	No insulation breakdown.	Signal Contacts Energized at 150V AC for 1 min. Power Contacts Energized at 600V AC for 1 min.
Mating Durability	Contact resistance of the signal part 80m Ω Max. Power part 30m Ω Max.	100 times
Vibration Proof	No electrical discontinuity of 1 μ s or more	Frequency 10 - 55Hz, half amplitude 0.75mm, 10 cycles in each of the 3-axis directions each for 5 minutes per cycle
Shock Resistance	No electrical discontinuity of 1 μ s or more	Acceleration of 490m/s ² ; duration 11ms, sine half-wave, 3 cycles in each of the 3 axes each in both directions.
Moisture Resistance	Contact Resistance Signal : 80m Ω Max. / Power : 30m Ω Max. Insulation Resistance Signal : 100M Ω Min. / Power : 1,000M Ω Min.	Left to stand for 96 hours at a temperature of +40°C and a humidity of 90 to 95%
Temperature Cycle	Contact Resistance Signal : 80m Ω Max. / Power : 30m Ω Max. Insulation Resistance Signal : 100M Ω Min. / Power : 1,000M Ω Min.	Temperature -55 → +85°C 5 cycles for a series of time periods : 30 minutes → 30 minutes

Note 1 : Includes temperature rise due to current flow.

Note 2 : The term "storage" refers to the long-term storage condition of unused products before mounting on PCB.

Materials / Finish

Part	Materials		Finish	UL Standard
Insulator (FX23)	Header	Polyamide Resin	Black Color	UL94V-0
	Receptacle	LCP Resin		
Insulator (FX23L)	Header	Polyamide Resin		UL94V-0
	Receptacle			
Contact	Header	Copper Alloy	Contacted Part : Gold Plating	-
	Receptacle		Signal Contact-mounting Part : Gold Plating Power Contact-mounting Part : Pure Tin Plating	
Retention Tab	Brass		Pure Tin Plating	-

Product Number Structure

Refer to the chart below when determining the product specifications from the product number.
Please select from the product numbers listed in this catalog when placing orders.

Straight Header

FX23 - 120 P - 0.5 SV 15
 ① ② ③ ④ ⑤ ⑥

Straight Receptacle

FX23 - 120 S - 0.5 SV 10
 ① ② ③ ④ ⑤ ⑥

Right Angle Receptacle

FX23 - 120 S - 0.5 SH
 ① ② ③ ④ ⑤

① Series Name	FX23	④ Contact Pitch	0.5mm
② No. of Pos.	20, 40, 60, 80, 100, 120	⑤ Product Type	SV : Straight SH : Right angle type
③ Connector Type	P : Header type S : Receptacle type	⑥ Product Height Type	Mated Height [mm] = Numerical value on the header side + Numerical value on the receptacle side

Straight Header

FX23L - 120 P - 0.5 SV 8

High Speed Transmission Properties (FX23 : h=15mm, FX23L : h=12mm)

● Pin Assignment

The following pin arrangement is recommended to match the 100Ω differential impedance and to contain cross-talk.

● Differential Impedance 80ps Rise Time (20 to 80%)

Meets the criterion of $100 \pm 10\Omega$ at the rise time of 80ps (20 to 80%).

● Insertion Loss

● Return Loss

Superior insertion loss and return loss characteristics up to 5GHz.

● Near End Cross-talk (NEXT)

● Far End Cross-talk (FEXT)

Low cross-talk up to 10GHz.

● Insertion Loss/Cross-talk Ratio (ICR) for FEXT

- Signal pin
- Victim Diff pair
- Aggressor Diff pair
- Ground pin

Insertion loss/cross-talk ratio (ICR) for FEXT using 5 sets of Aggressors has an adequate margin according to the specification of IEEE802.3ap.

Storing FX23 Series

There are two types of trays (A and B) for the FX23 Series. These have been designed to stack in alternating order (A-B-A-B...) for shipping and storage.

If tray A is stacked on top of another tray A, or if tray B is stacked on top of another tray B, the trays will put a load on the connectors, potentially causing connector breakage or deformation.

OK

When stacked correctly, the outer structure of the trays will prevent any load from being placed on the connectors below.

When stacked incorrectly, the outer structure of the trays will not function, resulting in a load added to the connector.

When storing the FX23 Series, please ensure that the trays are stacked in alternating order.

Recommended Temperature Profile

< Applicable Conditions >

- Test PCB Dimensions : 110 × 60 × 1.6mm
- Material : Glass epoxy
- Solder Composition : Sn-3Ag-0.5Cu
- Flux Content : 11wt%
- Metal Mask Thickness : 0.12mm, 0.15mm
- Number of Reflow Times : 2 times Max.

*The temperature profile is a reference under the condition of the above settings : Temperature profile may change depending on solder paste types, manufacturers, PCB size, and other soldering materials. Please fully check the mounting conditions before use.

Cleaning Conditions

● Cleaning with Organic Solvent

Solvent	Cleaning at Normal Temperature	Heated Cleaning
IPA (Isopropyl alcohol)	○	○

● Cleaning with Water

When water-type cleaning agents (terpene, alkaline saponification agents) are used, select cleaning agents based on the 'Table of Influence' on metals and resins issued by the cleaning agent manufacturer.

Caution : Do not leave with any water content left.

● Cleaning Precautions

When cleaning the parts with organic solvents and water-type agents, if flux or cleaning agents remain in the connector, it could cause the deterioration of electric performance. Please be sure to check if adequate cleaning has been carried out.

Usage Precautions

● About the Specified Dimension Between PCBs

The dimension between PCBs shall be within the following range :

: Stacking Height

● Securing PCBs

Please take measures to secure the PCB other than using connectors. Using only the connectors to support the board may result in a load to the connector that results in damage or contact failure.

● Cautions in Mating Operations

- This connector is designed to prevent reverse insertion. The connector could be damaged if excessive force is exerted when mating. Avoid excessive force when mating. Mate only after confirming the following connector properties (chamfer of the external face) :

- The self-alignment range is $\pm 1.2\text{mm}$ in both the X and Y directions. After beginning to mate the connectors within the misalignment range, proceed by mating in a straight line without forcing the connector.

- When mating/un-mating, it is strongly recommended to insert or remove in a straight line. If not possible due to board layout, insertion and removal should be carried out within the following inclination angle. Moreover, during the mating operation, be sure to proceed without forcibly applying a load to the connector. Allow the connector to be placed straight when the mating operation is completed.
- X Direction (Longitudinal Direction) ⇒ for 20, 40, 60pos. : within 2°
for 80, 100, 120pos. : within 10°
- Y Direction (Transverse Direction) ⇒ within 0.5°

Note : This is not a recommended operation. Damage to the connector could occur.

● Permissible Misalignment in the Mated State (Floating Amount)

This connector is designed to float when mated. The permissible misalignment between PCBs in the mated state is ±0.6mm in both the X and Y directions. However, this connector is not suitable for misalignment absorption when the misalignment amount is constantly changing due to vibration, etc. Be sure to secure PCBs after mating. Additionally, the number of repetitive floating operations shall be according to the number of connector insertion/withdrawal cycles.(100 times Max.)

While Taking into Consideration

Specifications mentioned in this catalog are reference values. When considering to order or use this product, please review the Drawing and Product Specifications sheets. Use an appropriate cable when using the connector in combination with cables. If considering usage of a non-specified cable, please contact your sales representative. If assembly process is done by jigs & tools which are not identified by Hirose, the warranty of the product may be affected. If considering usage for below mentioned applications, please contact your sales representative. In cases where the application will demand a high level of reliability, such as automotive, medical instruments, public infrastructure, aerospace/defense etc. Hirose must review before assurance of reliability can be given.
