

HA-5127, HA-5127A

8.5MHz, Ultra-Low Noise Precision Operational Amplifier

FN2906
Rev 8.00
November 29, 2011

The HA-5127 monolithic operational amplifier features an unparalleled combination of precision DC and wideband high speed characteristics. Utilizing the Intersil D. I. technology and advanced processing techniques, this unique design unites low noise ($3\text{nV}/\sqrt{\text{Hz}}$) precision instrumentation performance with high speed ($10\text{V}/\mu\text{s}$) wideband capability.

This amplifier's impressive list of features include low V_{OS} ($10\mu\text{V}$), wide unity gain-bandwidth (8.5MHz), high open loop gain ($1800\text{V}/\text{mV}$), and high CMRR (126dB). Additionally, this flexible device operates over a wide supply range ($\pm 5\text{V}$ to $\pm 15\text{V}$) while consuming only 140mW of power.

Using the HA-5127 allows designers to minimize errors while maximizing speed and bandwidth.

This device is ideally suited for low level transducer signal amplifier circuits. Other applications which can utilize the HA-5127's qualities include instrumentation amplifiers, pulse amplifiers, audio preamplifiers, and signal conditioning circuits. This device can easily be used as a design enhancement by directly replacing the 725, OP25, OP06, OP07, OP27 and OP37. For the military grade product, refer to the HA-5127/883 data sheet.

Pinout

Features

- Slew Rate $10\text{V}/\mu\text{s}$
- Unity Gain Bandwidth 8.5MHz
- Low Noise $3\text{nV}/\sqrt{\text{Hz}}$ at 1kHz
- Low V_{OS} $10\mu\text{V}$
- High CMRR 126dB
- High Gain $1800\text{V}/\text{mV}$
- Pb-Free Available (RoHS Compliant)

Applications

- High Speed Signal Conditioners
- Wide Bandwidth Instrumentation Amplifiers
- Low Level Transducer Amplifiers
- Fast, Low Level Voltage Comparators
- Highest Quality Audio Preamplifiers
- Pulse/RF Amplifiers

Ordering Information

PART NUMBER (Note 3)	PART MARKING	TEMP. RANGE (°C)	PACKAGE	PKG. DWG. #
HA7-5127A-5 (Note 4)	HA7- 5127A-5	0 to +75	8 Ld CERDIP	F8.3A
HA9P5127-5 (Note 4)	5127 5	0 to +75	8 Ld SOIC	M8.15
HA9P5127-5Z (Note 1)	5127 5Z	0 to +75	8 Ld SOIC (Pb-free)	M8.15
HA9P5127-5ZX96 (Notes 1, 2)	5127 5Z	8 Ld SOIC (Pb-free)		M8.15

NOTES:

1. These Intersil Pb-free plastic packaged products employ special Pb-free material sets, molding compounds/die attach materials, and 100% matte tin plate plus anneal (e3 termination finish, which is RoHS compliant and compatible with both SnPb and Pb-free soldering operations). Intersil Pb-free products are MSL classified at Pb-free peak reflow temperatures that meet or exceed the Pb-free requirements of IPC/JEDEC J STD-020.
2. Please refer to [TB347](#) for details on reel specifications.
3. For Moisture Sensitivity Level (MSL), please see device information page for [HA-5127](#), [HA-5127A](#). For more information on MSL please see techbrief [TB363](#).
4. Not recommended for new designs.

Absolute Maximum Ratings

Supply Voltage Between V+ and V- Terminals 44V
 Differential Input Voltage (Note 7) 0.7V
 Output Current Full Short Circuit Protection

Operating Conditions

Temperature Range
 HA5127/27A-5 0°C to +75°C

Thermal Information

Thermal Resistance (Typical, Note 6) θ_{JA} (°C/W) θ_{JC} (°C/W)
 CERDIP Package 115 28
 SOIC Package 157 N/A
 Maximum Junction Temperature (Ceramic Package, Note 5) . . . +175°C
 Maximum Junction Temperature (Plastic Package) +150°C
 Maximum Storage Temperature Range -65°C to +150°C
 Pb-Free Reflow Profile. see link below
<http://www.intersil.com/pbfree/Pb-FreeReflow.asp>

CAUTION: Do not operate at or near the maximum ratings listed for extended periods of time. Exposure to such conditions may adversely impact product reliability and result in failures not covered by warranty.

NOTES:

- Maximum power dissipation, including output load must be designed to maintain the maximum junction temperature below +175°C for Hermetic packages, and below +150°C for the plastic packages.
- θ_{JA} is measured with the component mounted on a low effective thermal conductivity test board in free air. See Tech Brief [TB379](#) for details.
- For differential input voltages greater than 0.7V, the input current must be limited to 25mA to protect the back-to-back input diodes.

Electrical Specifications $V_{SUPPLY} = \pm 15V$, $C_L < 50pF$, $R_S < 100\Omega$. **Boldface limits apply over the operating temperature range, 0°C to +75°C.**

NOTES:

- This parameter value is based upon design calculations.
- Refer to Typical Performance Curves.
- Full power bandwidth guaranteed based on slew rate measurement using: $\text{FPBW} = \frac{\text{Slew Rate}}{2\pi V_{\text{PEAK}}}$.
- Refer to "Test Circuits and Waveforms" on page 3.
- Settling time is specified to 0.1% of final value for a 10V output step and $A_V = -1$.
- Compliance to datasheet limits is assured by one or more methods: production test, characterization and/or design.

14. $A_V = -1$.
15. Feedback and summing resistors should be 0.1% matched.
16. Clipping diodes are optional.
HP5082-2810 recommended.

FIGURE 2. SETTLING TIME TEST CIRCUIT**Schematic Diagram**

Application Information

NOTE: Tested Offset Adjustment Range is $|V_{OS} + 1\text{mV}|$ minimum referred to output. Typical range is $\pm 4\text{mV}$ with $R_T = 10\text{k}\Omega$.

FIGURE 3. SUGGESTED OFFSET VOLTAGE ADJUSTMENT

Low resistances are preferred for low noise applications as a $1\text{k}\Omega$ resistor has $4\text{nV}/\sqrt{\text{Hz}}$ of thermal noise. Total resistances of greater than $10\text{k}\Omega$ on either input can reduce stability. In most high resistance applications, a few picofarads of capacitance across the feedback resistor will improve stability.

Rev 3, 3/11

1. Dimensioning and tolerancing per ANSI Y14.5M-1982.
2. Package length does not include mold flash, protrusions or gate burrs. Mold flash, protrusion and gate burrs shall not exceed 0.15mm (0.006 inch) per side.
3. Package width does not include interlead flash or protrusions. Interlead flash and protrusions shall not exceed 0.25mm (0.010 inch) per side.
4. The chamfer on the body is optional. If it is not present, a visual index feature must be located within the crosshatched area.
5. Terminal numbers are shown for reference only.
6. The lead width as measured 0.36mm (0.014 inch) or greater above the seating plane, shall not exceed a maximum value of 0.61mm (0.024 inch).
7. Controlling dimension: MILLIMETER. Converted inch dimensions are not necessarily exact.
8. This outline conforms to JEDEC publication MS-012-AA ISSUE C.

Ceramic Dual-In-Line Frit Seal Packages (CERDIP)

NOTES:

1. Index area: A notch or a pin one identification mark shall be located adjacent to pin one and shall be located within the shaded area shown. The manufacturer's identification shall not be used as a pin one identification mark.
2. The maximum limits of lead dimensions b and c or M shall be measured at the centroid of the finished lead surfaces, when solder dip or tin plate lead finish is applied.
3. Dimensions b1 and c1 apply to lead base metal only. Dimension M applies to lead plating and finish thickness.
4. Corner leads (1, N, N/2, and N/2+1) may be configured with a partial lead paddle. For this configuration dimension b3 replaces dimension b2.
5. This dimension allows for off-center lid, meniscus, and glass overrun.
6. Dimension Q shall be measured from the seating plane to the base plane.
7. Measure dimension S1 at all four corners.
8. N is the maximum number of terminal positions.
9. Dimensioning and tolerancing per ANSI Y14.5M - 1982.
10. Controlling dimension: INCH
