HCMS-201X Series

HCMS-231X

HCMS-235X Series

CMOS Extended Temperature Range 5 x 7 Alphanumeric Displays

Data Sheet

Description

The HCMS-201X, HCMS-231X and the sunlight viewable HCMS-235X series are 5 x 7 LED four character displays contained in 12 pin dual-in-line packages designed for displaying alphanumeric information. The character height for the HCMS-201X series displays is 3.8 mm (0.15 inch), and for the HCMS-231X and HCMS-235X series displays the character height is 5.0 mm (0.20 inch). The HCMS-201X series displays are available in four LED colors: standard red, high efficiency red, yellow and high performance green. The HCMS-231X series are available in all

Features

- On-board low power CMOS IC
Integrated shift register with constant current LED drivers
- Wide operating temperature range
-55°C to +100°C
- Compact glass ceramic 4 character package
HCMS-201X series X-stackable
HCMS-231X/-235X
Series X-Y stackable
- HCMS-235X series are sunlight viewable
- Five colors
Standard red
High efficiency red
Orange
Yellow
High performance green
- 5 x 7 LED matrix displays full ASCII set
- Two character heights
3.8 mm (0.15 inch)
5.0 mm (0.20 inch)
- Wide viewing angle
X Axis = $\pm 50^\circ$
Y Axis = $\pm 65^\circ$
- Long viewing distance
HCMS-201X series to 2.6 meters (8.6 feet)
HCMS-231X/-235X series to 3.5 meters (11.5 feet)
- Categorized for luminous intensity
- HCMS-2011/2013
HCMS-2311/-2313/-2314
HCMS-2351/-2353/-2354
Useable in night vision lighting applications
- HCMS-2011/-2013, HCMS-2311/-2313 and HCMS-2351/-2353:
Categorized for color

Typical Applications

- Avionics
- Communications systems
- Radar systems
- Fire control systems

ESD WARNING: STANDARD CMOS HANDLING PRECAUTIONS SHOULD BE OBSERVED.

five LED colors. The HCMS-235X series displays are available in four LED colors: high efficiency red, orange, yellow and high performance green. The HCMS-201X series displays are end stackable. The HCMS-231X and HCMS-235X series displays are end/row stackable.

These displays are designed with on-board CMOS integrated circuits for use in applications

where conservation of power is important. The two CMOS ICs form an on-board 28-bit serial-in-parallel-out shift register with constant current output LED row drivers. Decoded column data is clocked into the on-board shift register for each refresh cycle. Full character display is achieved with external column strobing.

Compatibility with HDSP-201X/-231X/-235X TTL IC Series Displays

The HCMS-201X, HCMS-231X and HCMS-235X CMOS IC displays are “drop-in” replacements for the equivalent HDSP-201X, HDSP-231X and HDSP-235X TTL IC displays. The 12 pin glass/ceramic package configuration, four digit character matrix and pin functions are identical.

Notes:

- Maximum allowable power dissipation is derived from $V_{DD} = 5.25$ V, $V_B = 2.4$ V, $V_{COL} = 3.5$ V, 20 LEDs ON per character, 20% DF.
- The power dissipation for these displays should be derated as follows:
 HCMS-201X series derate above 83°C at 17 mW/°C, $R_{\theta_{JA}} = 60^\circ\text{C/W}$
 HCMS-231X series derate above 88°C at 22 mW/°C, $R_{\theta_{JA}} = 45^\circ\text{C/W}$
 HCMS-235X series derate above 71°C at 23 mW/°C, $R_{\theta_{JA}} = 45^\circ\text{C/W}$.
 Deratings based on $R_{\theta_{PC-A}} = 35^\circ\text{C/W}$ per display for printed circuit board assembly.
 See Figure 1 for power derating based on lower $R_{\theta_{JA}}$ values.

Notes:

- These LED displays are categorized for luminous intensity, with the intensity category designated by a letter code on the back of the package.
- The HCMS-2011/-2311/-2351 and HCMS-2013/-2313/-2353 are categorized for color with the color category designated by a number on the back of the package.
- T_i refers to the initial case temperature of the display immediately prior to the light measurement.
- Dominant wavelength, λ_d , is derived from the CIE Chromaticity Diagram, and represents the single wavelength which defines the color of the device.
- The luminous sterance of the individual LED pixels may be calculated using the following equations:

$$L_v(\text{cd/m}^2) = I_v(\text{Candela}) * \text{DF} / \text{A}(\text{Metre})^2$$

$$L_v(\text{Footlamberts}) = \pi I_v(\text{Candela}) * \text{DF} / \text{A}(\text{Foot})^2$$

Where: A = LED pixel area = $5.3 \times 10^{-8}\text{M}^2$ or $5.8 \times 10^{-7}\text{ft}^2$
 DF = LED on-time duty factor

Electrical Description

Each display device contains four 5×7 LED dot matrix characters and two CMOS integrated circuits, as shown in Figure 4. The two CMOS integrated circuits form an on-board 28 bit serial-in-parallel-out shift register that will accept standard TTL logic levels. The Data Input, pin 12, is connected to bit position 1 and the Data Output, pin 7, is connected to bit position 28. The shift register outputs control constant current sinking LED row drivers. The nominal current sink per LED driver is 11 mA for the HCMS-201X displays, 13 mA for the HCMS-231X displays and 18 mA for the HCMS-235X displays. A logic 1 stored in the shift register enables the corresponding LED row driver and a logic 0 stored in the shift register disables the corresponding LED row driver.

The electrical configuration of these CMOS IC alphanumeric displays allows for an effective

Figure 2. Relative Luminous Intensity vs Ambient Temperature.

Figure 3. Peak Column Current vs Column Voltage.

interface to a display controller circuit that supplies decoded character information. The row data for a given column (one 7 bit byte per character) is loaded (bit serial) into the on-board 28 bit shift register with high to low transitions of the Clock input. To load decoded character information into the display, column data for character 4 is loaded first and the column data for character 1 is loaded last in the following manner. The 7 data bits for column 1, character 4, are loaded into the on-board shift register. Next, the 7 data bits for column 1, character 3, are loaded into the shift register, shifting the character 4 data over one character position. This process is repeated for the other two characters until all 28 bits of column data (four 7 bit bytes of character column data) are loaded into the on-board shift register. Then the column 1 input, V_{COL} pin 1, is energized to illuminate column 1 in all four characters. This process is repeated for columns

2, 3, 4 and 5. All V_{COL} inputs should be at logic low to insure the display is off when loading data. The display will be blanked when the blanking input V_B , pin 8, is at logic low regardless of the outputs of the shift register or whether one of the V_{COL} inputs is energized.

Refer to Application Note 1016 for drive circuit information.

ESD Susceptibility

The HCMS-201X/-231X/-235X series displays have an ESD susceptibility ratings of CLASS 3 per DOD-STD-1686 and CLASS B per MIL-STD-883C. It is recommended that normal CMOS handling precautions be observed with these devices.

Soldering and Post Solder Cleaning

These displays may be soldered with a standard wave solder process using either an RMA flux and solvent cleaning or an OA flux and aqueous cleaning. For

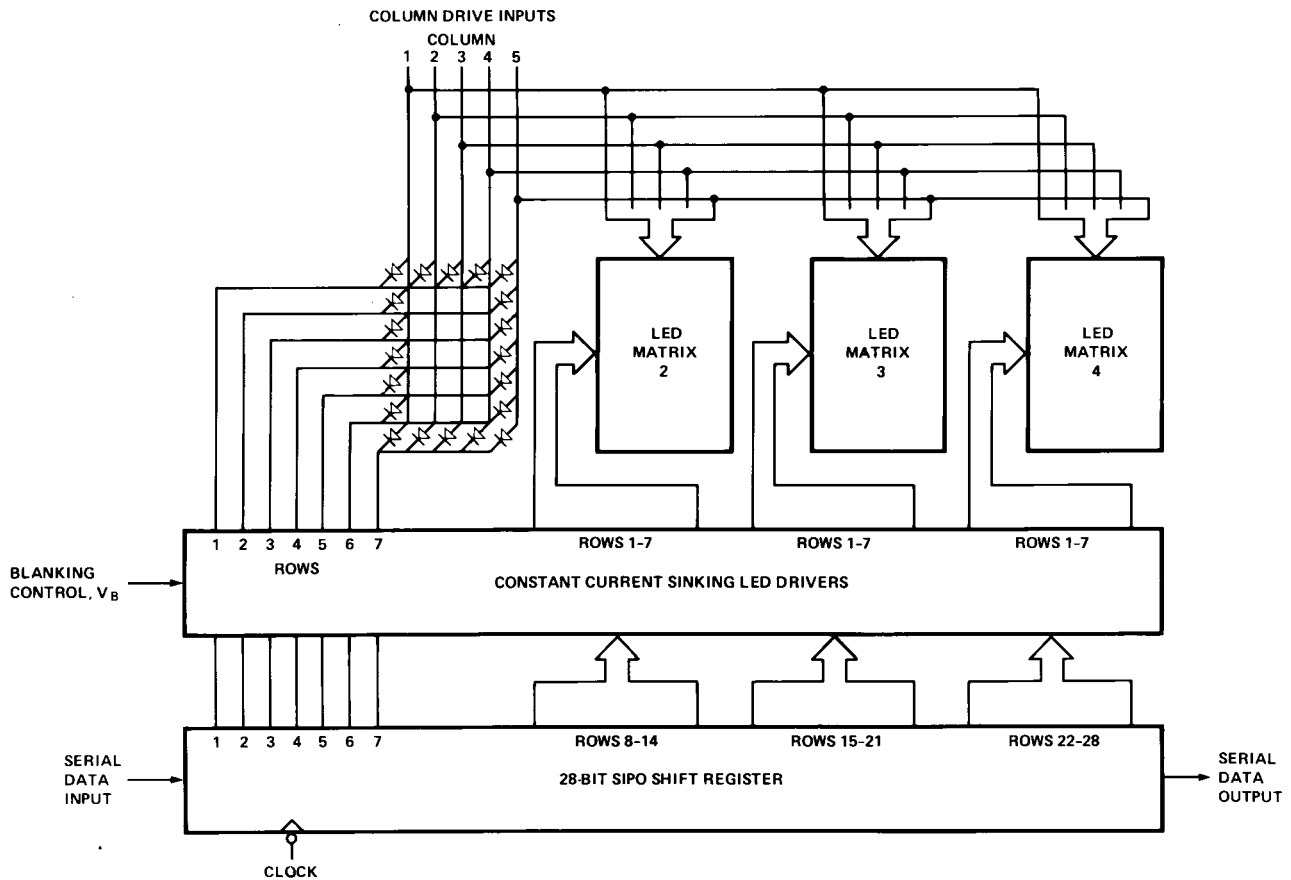

Figure 4. Block Diagram of an HCMS-2XXX Series LED Alphanumeric Display.

optimum soldering, the solder wave temperature should be 245°C and the dwell time for any display lead passing through the wave should be 1½ to 2 seconds. For more detailed information, refer to Application Note 1027 *Soldering LED Components*.

Contrast Enhancement

When used with the proper contrast enhancement filters, the HCMS-235X series displays are readable in sunlight and the HCMS-201X/231X series displays are readable in daylight ambients. Refer to Application Note 1029 *Luminous Contrast and Sunlight Readability of the HDSP-235X Series Alphanumeric Displays for Military*

Applications for information on contrast enhancement for sunlight and daylight ambients. Refer to Application Note 1015 *Contrast Enhancement Techniques for LED Displays* for information on contrast enhancement in moderate ambients.

Night Vision Lighting

When used with the proper NVG/DV filters, the HCMS-2311/-2351 and HCMS-2133/-2353 displays may be used in night vision lighting applications. The HCMS-2311/-2351 (yellow) displays are used as master caution and warning indicators. The HCMS-2313/-2353 (high performance green) displays are used for general instrumentation. For a

list of NVG/DV filters and a discussion on night vision lighting technology, refer to Application Note 1030 *LED Displays and Indicators and Night Vision Imaging System Lighting*.

Controller Circuits, Power Calculations and Display Dimming

Refer to Application Note 1016 *Using the HDSP-2000 Alphanumeric Display Family* for information on controller circuits to drive these displays, how to do power calculations and a technique for display dimming.
