

1 Form A Plug-in type

Form A type also available with 48A contact capacity

Refer to data sheet, starting on [page 9](#).

FEATURES

1. Excellent resistance to contact welding

Owing to the pre-tension and kick-off mechanism, the 1 Form A passes TV-15 and the 2 Form A passes TV-10.

2. High-capacity and long life

Contact arrangement	1 Form A type	2 Form A type
Contact capacity	30A	20A
Electrical life (at 20 cpm)	2×10 ⁵	
Mechanical life (at 180 cpm)	DC type: 10 ⁷ , AC type: 5×10 ⁶	

3. Excellent surge resistance

Between contacts and coil, the surge voltage is more than 10,000 V (when surge waveform accords with JEC-212-1981).

4. Compatible with all major safety standards

UL, CSA, VDE and TÜV certified

TYPICAL APPLICATIONS

1. Office equipment

Copiers, package air conditioners, automatic vending machines.

2. Industrial equipment

Machine tools, molding equipment, wrapping machines, food processing equipment, etc.

3. Home appliances

Air conditioners, microwave ovens, televisions, stereo systems, water heaters and air heating equipment.

PRE-TENSION AND KICK-OFF MECHANISM

1. Pre-tension mechanism

Before operation, the moving spring is pre-tensioned by being held down by a moving plate. As a result, at the ON moment, with little follow, contact pressure is ensured with low bounce.

2. Kick-off mechanism

Even when contact welding has occurred, at the moment of return, the moving plate taps the moving spring (kick-off) and, in effect, works to tear the weld apart, thus improving resistance to welding.

NOTES

1. The dust cover should not be removed since doing so may alter the characteristics.

2. Avoid use under severe environmental conditions, such as high humidity, organic gas or in dust, oily locations and locations subjected to extremely frequent shock or vibrations.

3. When mounting, use spring washers. Optimum fastening torque ranges from 49 to 68.6 N·m (5 to 7 kgf·cm).
4. Firmly insert the receptacles so that there is no slack or looseness. To remove a receptacle, 19.6 to 39.2 N (2 to 4 kg) of pulling strength is required. Do not remove more than one receptacle at one time. Always remove one receptacle at a time and pull it straight outwards.

5. When using the AC type, the operate time due to the in-rush phase is 20 ms or more. Therefore, it is necessary for you to verify the characteristics for your actual circuit.
6. When using the push-on blocks for the screw terminal type, use crimped terminals and tighten the screw-down terminals to the torque below.

M4.5 screw:
147 to 166.6 N·cm (15 to 17 kgf·cm)

M4 screw:
117.6 to 137 N·cm (12 to 14 kgf·cm)

M3.5 screw:
78.4 to 98 N·cm (8 to 10 kgf·cm)

**Ideal for Solar inverter
Compact size, 1 Form A 48A
Power Relay**

**HE RELAYS
PV Type**

FEATURES

- **48 A current at 250 V AC achieved in compact size (L: 33 × W: 38 × H: 36.3 mm L: 1.299 × W: 1.496 × H: 1.429 inch)**
Due to improved conduction efficiency, wide terminal blades are used.

- **High insulation and 10,000 V surge breakdown voltage (between contacts and coil) achieved.**
- **Conforms to various safety standards**
UL, C-UL and VDE

TYPICAL APPLICATIONS

- **Photovoltaic power generation systems (Solar inverter)**

- **Contact gap: 2.5 mm (VDE0126 compliant)**

Compliant with European photovoltaic standard VDE0126
Compliant with EN61810-1 2.5 kV surge voltage (between contacts)

- **Contributes to energy saving in devices thanks to reduced coil hold voltage**

Coil hold voltage can be reduced down to 40% of the nominal coil voltage (ambient temperature 20°C 68°F). This equals to power consumption of approximately 310 mW.

*Coil hold voltage is the coil voltage after 100 ms following application of the nominal coil voltage.

* –50 to +85°C –58 to +185°F (When applied coil hold voltage is 50% to 60% of nominal coil voltage)

4) Condensation

Condensation forms when there is a sudden change in temperature under high temperature and high humidity conditions. Condensation will cause deterioration of the relay insulation.

5) Freezing

Condensation or other moisture may freeze on the relay when the temperatures is lower than 0°C 32°F. This causes problems such as sticking of movable parts or operational time lags.

6) Low temperature, low humidity environments

The plastic becomes brittle if the relay is exposed to a low temperature, low humidity environment for long periods of time.

■ Certification

This relay is C-UL certified.

48 A 277 V AC

This relay is certified by VDE as an electromagnetic relay that complies with VDE0435.

48 A 250 V AC $\cos\phi = 0.8$

■ Others

1) For precautions regarding use and explanations of technical terminology, please refer to our web site.

(panasonic-electric-works.net/ac)

2) To ensure good operation, please keep the voltage on the coil ends to $\pm 5\%$ (at 20°C 68°F) of the rated coil operation voltage. Also, please be aware that the pick-up voltage and drop-out voltage may change depending on the temperature and conditions of use.

3) Keep the ripple rate of the nominal coil voltage below 5%.

4) The cycle lifetime is defined under the standard test condition specified in the JIS C 5442 standard (temperature 15 to 35°C 59 to 95°F, humidity 25 to 85%).

Check this with the real device as it is affected by coil driving circuit, load type, activation frequency, activation phase, ambient conditions and other factors. Also, be especially careful of loads such as those listed below.

(1) When used for AC load-operating and the operating phase is synchronous.

Rocking and fusing can easily occur due to contact shifting.

(2) Highly frequent load-operating

When highly frequent opening and closing of the relay is performed with a load that causes arcs at the contacts, nitrogen and oxygen in the air is fused by the arc energy and HNO_3 is formed. This can corrode metal materials.

Three countermeasures for these are listed here.

- Incorporate an arc-extinguishing circuit.
- Lower the operating frequency
- Lower the ambient humidity

5) This value can change due to the switching frequency, environmental conditions, and desired reliability level, therefore it is recommended to check this with the actual load.

6) Heat, smoke, and even a fire may occur if the relay is used in conditions outside of the allowable ranges for the coil ratings, contact ratings, operating cycle lifetime, and other specifications. Therefore, do not use the relay if these ratings are exceeded.

7) If the relay has been dropped, the appearance and characteristics should always be checked before use.

8) Incorrect wiring may cause unexpected events or the generation of heat or flames.

ACCESSORIES (Terminal sockets)

HE RELAY ACCESSORIES

FEATURES

1. Snap-in mounting to DIN rails is possible.

Can be inserted into 35 mm wide DIN rails. Removal is easy, too.

2. Sure and easy wiring

The use of UP terminals makes wiring exceptionally easy and sure.

3. Hold-down clips can be stored in main unit

Because the hold-down clips can be stored in the main unit, there is no need to remove them when, for example, wiring is changed.

TYPES

No. of poles	Types	Part No.	Packing quantity	
			Carton	Case
For 1 Form A	Single side stable type	JH1-SF	10 pcs.	50 pcs.
For 2 Form A	Single side stable type	JH2-SF	10 pcs.	50 pcs.

SPECIFICATIONS

Item	Specifications	
Arrangement	1 Form A	2 Form A
Max. continuous current	30A 250V AC	20A 250V AC
Breakdown voltage (initial)	2,000 Vrms for 1min (between terminals) (Detection current: 10mA.)	
Insulation resistance	Min. 100MΩ (between poles)	
Heat resistance	150°C ±3°C for 1 hour	

DIMENSIONS (Unit: mm inch)

1 Form A and 2 Form A types

Note: The JH1-SF (1 Form A single side stable type) does not have receptacles (tooth rests) for numbers 2, 3, 7, and 8.
The JH2-SF (2 Form A single side stable type) does not have receptacles (tooth rests) for numbers 7 and 8.

MOUNTING METHOD

1. Relay mounting

2. Installing to a DIN rail

3. Removing from a DIN rail

NOTES

1. Be careful not to drop the relay. It is made of heat-hardened resin and may break.

2. Be sure to tighten the screw-down terminals firmly. Loose terminals may lead to the generation of heat.

3. When the 1 Form A is used in situations covered by the Japanese Electrical Appliance and Material Control Law, the use of 5.5 mm² cabling and 30 A current is not allowed. Consequently, the circuit should be less than 20 A.

4. When fixing the terminal socket with screws, to avoid torque damage and distortion, apply torque within the ranges shown below.

M3.5 screws:

0.784 to 0.98 N·m (8 to 10 kgf·cm)

M4 screws:

1.176 to 1.37 N·m (12 to 14 kgf·cm)
