

Isolating switching amplifier

2-channel

IM1-231EX-R

The 2-channel IM1-231EX-R isolating switching amplifier is equipped with intrinsically safe input circuits.

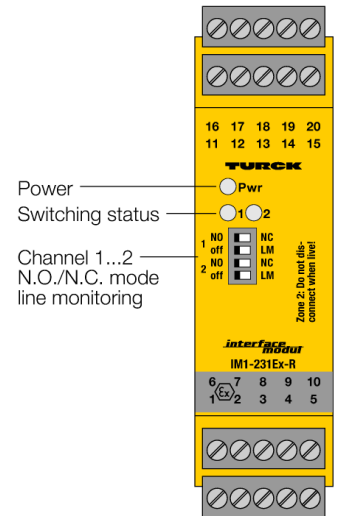

Sensors according to EN 60947-5-6 (NAMUR) or potential-free contact transmitters can be connected to the device.

The output circuits each feature a relay with a changeover contact. In addition, the device features a common alarm output.

Via four switches on the front, the output mode (work or quiescent current behavior, i.e. NO/NC) can be switched on and off separately for each channel as well as wire-break (WB) and short-circuit monitoring (SC).

When using mechanical contacts, wire-break and short-circuit monitoring must be switched off or the contacts must be wired to resistors (II) (see circuit diagram).

The Pwr LED lights green to indicate operational readiness. The 2-color LED 1 lights yellow to indicate the switching status of the output. In the event of an input circuit error, the 2-color LED turns red, with the input circuit monitoring switched on. Thereupon the output and the alarm relay drop out.

- 2 relay outputs (changeover)
- Output mode adjustable (NO/NC mode)
- Input circuits monitored for wire-break/short-circuit (ON/OFF switchable)
- Common alarm output
- Complete galvanic isolation
- Input reverse-polarity protected
- ATEX, IECEx, TR CU, INMETRO, NEPSI
- Installation in zone 2
