

Modular Valve Series

5.2 to 79 gpm
3000, 3600, 5000 psi

Overview

The modular valve is designed and engineered to integrate multiple hydraulic valve operations into a single unit, which eliminates the need for piping between valves and enables configuration of a

circuit using a single modular valve. The result is an innovative valve system whose energy and materials efficiency provide advantages in terms of

compact configuration, reliability, and more. The illustrations below show one example of a circuit configuration using this system.

Features

- 1 High pressure and high volume. Available maximum operating pressure operations are 3000, 3600, and 5000 psi, while maximum control flow rates are G01 13 gpm, G03 26 gpm, G04 79 gpm.
- 2 Ganging and bolting format allows for quick and easy circuit configuration as well as circuit changes and additions.
- 3 Compact module configurations greatly reduce space requirements.
- 4 Maintenance costs are also reduced because less piping and fewer couplings mean less need for acid rinsing and flushing of pipes.
- 5 Fewer fluid leak problems due to pipe resonance, noise, and loose couplings.
- 6 Circuit configuration is simple yet exact. Nameplates on the side of the valve show ISO codes that make it quick and easy to determine its performance.
- 7 A full lineup of models is available to meet a wide range of needs and circuit configurations: Model G01 (D03), G03 (D05), G04 (D07).

Integrated Structural Diagram

Integrated Circuit Diagram

Specifications

Name	Nominal Diameter (Size)	Maximum Working Pressure psi	Maximum Flow Rate gpm	Gasket Surface Dimensions	Possible Number of Ganged Valves (Note 2)
01 Series	1/8	3600 (Note 1)	13	ISO 4401-03-02-0-94	1 to 4
03 Series	3/8	3600 (Note 1)	26	ISO 4401-05-04-0-94	1 to 4
04 Series	1/2	5000	79	ISO 4401-07-06-0-94	1 to 3 (Note 3)

- Note) 1. The M35 Series is available as a 5000 psi maximum operating pressure version of the 01 and 03 Series. For details, see pages F92 and F93.
2. The number of ganged valves does not include solenoid valves.
3. Up to four valves can be ganged together if the maximum operating pressure is less than 3000 psi.

K Series Modular Valve

The valve shown in the photograph is available with nominal diameter 01 and 03 size adjusting bolts. Use the following format for specification.

Example: OCY-G01-W-Y-K-20

Auxiliary symbol
K: With handle

Dimensions in parentheses indicate nominal diameter 03.

Precautions when Ganging Modular Valves

Note the following precautions when ganging modular valves together in the applicable example circuits.

Circuit Diagram	Description	Incorrect	Correct
Locking Circuit and Pressure Reducing Circuit	●Cylinder position not maintained ○Leaks occur because, during the pilot check, the line being maintained flows into the pilot line of the reducing valve.	Solenoid Pilot Operate Check Modular Valve (AB Line) Pressure Reducing Modular Valve (B Line) 	
Pressure Reduction Circuit with Speed Control	●Insufficient cylinder output and drop in speed ○Pressure increases due to the restrictor effect of the flow regulator. Since the pilot runs from that line, pressure reduction makes smooth operation impossible.	Solenoid Flow Regulator Modular Valve (A, B Line, Meter Out) Pressure Reducing Modular Valve (B Line) 	
Locking Circuit and Speed Control Circuit	●Cylinder knocking ○Pressure is increased by the restrictor effect of the flow regulator. That pressure moves the pilot check in the closed direction, which causes the valve to repeatedly open and close.	Solenoid Flow Regulator Modular Valve (A, B Line, Meter Out) Pilot Operate Check Modular Valve (AB Line) 	

Valve Ganging Configuration Examples

Anti-cavitation Circuit

G⁰¹₀₃

- Surge pressure is prevented by the inertia of the actuator, and cavitation by fluid being sucked in through the opposite port, which is in negative pressure, is prevented.

- Example Valve Model Numbers (G03)

Relief Valve ———— ORO-G03-W*-J50

Vacuum Check Valve ——— OCV-G03-W-J50

Differential Circuit

G⁰¹₀₃

- When the cylinder advances, the rod side return fluid returns to the P port and the pump discharge rate and confluence are advanced at high speed (differential).

- Example Valve Model Numbers (G03)

Check valve ———— OC-G03-A*-J50

Differential check valve ——— OC-G03-AP*-J50

Important:

Cylinder effective output is the rod surface area portion only.

2-speed Circuit

G⁰¹₀₃

- This type of circuit allows variation between two actuator speeds. It prevents low-speed shock when the actuator starts up or stops, and it is used when the intermediate stroke is operated at high speed.

- Example Valve Model Numbers (G03)

2-speed Plate ———— OB-G 03-W-(H)-J 30

High-speed Flow Regulator Valve ——— OCV-G-03-W-Y-J51

Low-speed Flow Control Valve ——— OCF-G03-W60-Y-J50

*There is no problem with seals and other parts when mixing these valves with NACHI G03 modular valve design number (J) 30 valves.

*G03 module valve installation bolts
For M6: Design number J50
For M8: Design number 50
For E: 1/4 - 20UNC
Unit has commonality. Also, two J-pins have been inserted diagonally for M6 applications.

Note: G03 series modular valves have two T port locations: one on the A port side T_(A) and one on the B port side T_(B). The port that is used depends on the model number.

The G04 series modular valves do not have an L (DR₂) drain port, so they cannot be used in combination with pressure center type solenoid valves (D).

Relief Modular Valve

13 to 79 gpm
3600 to 5000 psi

Features

This modular relief valve provides maximum pressure control for a hydraulic circuit.

Wide ranging applicability Maximum Operating Pressure: 3600 to 5000 psi Pressure Adjustment Range: 115 to 3600, 5000.

Shockless unload, 2-pressure control, and other configurations are possible by switching the solenoid valve. Contact your agent for details.

Note: *See the Flow Rate - Low Pressure characteristics on page D-17 for information about items marked with an asterisk.

• Handling

- When using a remote control valve in a vent circuit, certain vent circuit pipe capacities can cause vibration. Because of this, thick steel pipe with an inside diameter of .15 in that is no longer than three meters is recommended. Vent piping cannot be used with the 01 size. If a vent port is required for the 03 size, add the auxiliary code "V".
- For use as a safety valve, use a pressure override that is higher than the required circuit pressure.

- Make sure that tank port back pressure is no greater than 29 psi.
- A small control flow rate can cause pressure instability. Use a control flow rate that is in accordance with the values shown below.
01 size: At least 1.3 gpm
03 size: At least 2.1 gpm
04 size: At least 2.1 gpm

For applications that require a flow rate that is less than the minimum flow rate, use an ORD-G** direct type relieve modular valve.

- Note that a sub plate and installation bolts are not included. See pages H4 or F-87-89 if these items are required.
- 04 series modular valves do not have an L (DR drain port, so they cannot be used in combination with pressure center type solenoid valves (D).
- Connect OR-G03-W*-(J) 50 to the two T-ports on the tanks.

Brake Modular Valve

5.2 to 7.9 gpm
115 to 3045, 3625 psi

Features

This modular pressure control valve prevents abnormal pressure when the actuator stops, enabling smooth stops.

Wide ranging applicability Maximum Operating Pressure: 3625 psi.

Pressure Adjustment Range: 115 to 3045, 3625 psi.

Specifications

Model No.	Nominal Diameter (Size)	Maximum Working Pressure psi	Maximum Flow Rate gpm	Pressure Adjustment Range psi	Weight lbs	Gasket Surface Dimensions

Pressure Reducing Modular Valve

10.5 to 79.2 gpm
3625, 5000 psi

Features

This modular valve makes the pressure in part of the circuit lower than that of the main circuit.

Even when pressure changes in the primary main circuit, the reduced secondary pressure is maintained at a

constant level.
Maximum Operating Pressure: 3625, 5075 psi.

Specifications

Model No.	Nominal Diameter (Size)	Maximum Working Pressure psi	Maximum Flow Rate gpm	Pressure Adjustment Range psi	Weight lbs	Gasket Surface Dimensions
OG-G01-PC-21 P1 P2	1/8	3625	13.2	21.7 to 500 115 to 1000 500 to 2320	2.8	ISO 4401-03-02-0-94

• Handling

- When using a remote control valve in a vent circuit, certain vent circuit pipe capacities can cause vibration. Because of this, thick steel pipe with an inside diameter of .15 in that is no longer than three meters is recommended. Vent piping cannot be used with the 01 size. If a vent port is required for the 03 size, add the auxiliary code "V".
- For the 03 size, the drainage can be allowed to escape through the T port. In the case of a valve with the auxiliary symbol B, however, run a return pipe from the drain discharge port directly to the tank.

- With the 04 sizes, piping is not required because drainage can be allowed to escape from the gasket side drain port. In the case of a valve with the auxiliary symbol B, however, run a return pipe from the drain discharge port directly to the tank.
- Note that a change in drain back pressure causes a change in setting pressure.
- With the 01, 03 sizes, the flow rate is limited at low pressures. See the Pressure-Flow Rate Characteristics on pages F-27 for more information.
- Note that a sub plate and installation bolts are not included. See pages H4 and

- F87-89 if these items are required.
- 04 series modular valves do not have an L (DR2) drain port, so they cannot be used in combination with pressure center type solenoid valves (D).
- With the 03, 04 sizes, the control port can be changed by altering the attachment orientation of the back cover. See the installation diagram for more information. After making this change, be sure also to make the other changes in accordance with the model number indicated on the nameplate.

Note: 1. O-ring 1A/B-** refers to JIS B2401-1A/B.
2. Specify G (internal drain) or GB (external drain) for the asterisk (*) in the kit model number.

Balanced Piston Type Pressure Reducing Modular Valve

10.5 gpm
21 to 3625 psi

Features

This modular valve makes the pressure in part of the circuit lower than the main circuit. Even when pressure changes in the primary main circuit, the reduced

secondary pressure is maintained at a constant level. Compared with the direct type, this type of valve has outstanding

Pressure-Flow Rate Characteristics, and a superior flow rate in the low pressure control range.

Maximum operating pressure: 3625 psi.

Specifications

Model No.	Nominal Diameter (Size)	Maximum Working Pressure psi	Maximum Flow Rate gpm	Pressure Adjustment Range psi	Weight lbs	Gasket Surface Dimensions

OGH-G04-B1-10 B3				115 to 1000 500 to 3625	17.6	

• Handling

- When using a remote control valve in a vent circuit, certain vent circuit pipe capacities can cause vibration. Because of this, thick steel pipe with an inside diameter of ϕ 4mm that is no longer than three meters is recommended. Vent piping cannot be used with the 01, 03 sizes.
- With the 01, 03 sizes, the flow rate is limited at low pressures. See the Pressure-

Flow Rate Characteristics on page F-37 and F-38 for more information.

- For the 03 size, the drainage can be allowed to escape through the T port. In the case of a valve with the auxiliary symbol B, however, run a return pipe from the drain discharge port directly to the tank.
- With the 04 sizes, piping is not required because drainage can be

allowed to escape from the gasket side drain port. In the case of a valve with the auxiliary symbol B, however, run a return pipe from the drain discharge port directly to the tank.

- Note that a change in drain back pressure causes a change in setting pressure.
- Note that a sub plate and installation bolts are not included. See pages H4 and F87-89 if these items are required.
- 04 series modular valves do not have an L (DR2) drain port, so they cannot be used in combination with pressure center type solenoid valves (D).
- With the 03, 04 sizes, the control port can be changed by altering the attachment orientation of the back cover. See the installation diagram for more information. After making this change, be sure also to make the other changes as in accordance with the model number indicated on the nameplate.
- Use the P port control valve concurrently with the 01 size central all-port-block (C5) solenoid valve if when the valve is in the central position and external pressure may cause the pressure at the control port to exceed the set pressure.

Two-Pressure Reducing Modular Valve

10.5 gpm
29 to 2030 psi

Features

When the pressure in part of the circuit is lower than the main circuit, this modular valve controls pressure by switching the low pressure to secondary pressure (high

pressure, low pressure). Even when pressure changes in the primary main circuit, the reduced secondary pressure is maintained

at a constant level.
Maximum Operating Pressure: 1000, 3625 psi

Understanding Model Numbers

• Handling

- See the Pressure-Flow Rate Characteristics for information about how the flow rate is controlled at low pressures.
- Note that a change in tank port back pressure causes a change in setting pressure.
- Instability occurs when there is a small setting pressure differential between the high pressure and low pressure, so be sure to maintain at least the minimum pressure differentials described below.
C Type:
At least 43 psi
1, 2 Type:
At least 72 psi
- Vent piping is not possible.
- Note that a sub plate and installation bolts are not included. See pages H4 and F87-89 if these items are required.
- Low pressure is attained when the solenoid is on.
- The coil surface temperature increases if this pump is kept continuously energized. Install the valve so there is no chance of it being touched directly by hand.
- The wiring in the connector is the same as the SA series wet type solenoid valve. (See page D-22)

Sequence Modular Valve

10.5 to 21 gpm
3625 psi

Features

This modular valve is a pressure control valve used for sequential actuator operations and for maintaining main circuit pressure.

Pressure adjustment is possible across a wide range, from 36 to 3045 psi.

Maximum Operating Pressure: 3625 psi.

Specifications

Model No.	Nominal Diameter (Size)	Maximum Working Pressure psi	Maximum Flow Rate gpm	Pressure Adjustment Range psi	Weight lbs	Gasket Surface Dimensions

Understanding Model Numbers

OQ - G 03 - P 2 A - (K) - J50

• Handling

- 1 The pressure adjustment range is expressed in terms of cracking pressure.
- 2 Install this valve directly above the sub plate or manifold.
- 3 When two or more of these valves are ganged in sequence, make sure the setting pressure differential between them is at least 145 psi.
- 4 Note that a sub plate and installation bolts are not included. See pages H4 and F87-89 if these items are required.

Installation Dimension Drawings

Note: Pressure is increased by clockwise (rightward) rotation of the adjusting screw (bolt), and decreased by counterclockwise (leftward) rotation.

Counter Balance Modular Valve

10.5 to 79 gpm
2030 psi

Features

This modular valve is used to control actuator back pressure and for other pressure control valve applications.

Pressure adjustment is possible across a wide range, from 36 to 2030 psi

Maximum Operating Pressure: 3625, 5075 psi

Specifications

Model No.	Nominal Diameter (Size)	Maximum Working Pressure psi	Maximum Flow Rate gpm	Pressure Adjustment Range psi	Weight lbs	Gasket Surface Dimensions

OQH-G04-B1A-10 B1C B1E				36 to 123 72 to 500 290 to 2030	17.6	

• Handling

- The pressure adjustment range is expressed in terms of cracking pressure.
- Run tank port piping directly to the tank, and ensure that back pressure is as small as possible.
- Note that a sub plate and installation bolts are not included. See pages H4 and F87-89 if these items are required.
- O4 series modular valves do not have an L (DR2) drain port, so they cannot be used in combination with pressure center type solenoid valves (D).

Pressure Switch Modular Valve

**13.2 gpm
3625 psi**

Features

This modular valve detects pressure changes inside the hydraulic circuit and opens and closes an electrical circuit accordingly.

High precision detection, high precision circuit control, outstanding reliability. Maximum operating pressure: 3625 psi Indicator light built into the DIN connector shows operational status at

a glance. A double type is also available for control of both port A and port B in a compact configuration.

Specifications

- Handling
- 1 See the detailed explanation on the next page for information about wiring inside connectors.
 - 2 Contacts are normally open type only, not normally closed type.
 - 3 In addition to load wiring, power supply wiring is also required to illuminate the indicator light. See the wiring diagram for more information.
 - 4 If the DIN connector interferes with other valves, remove the two switch installation bolts and change the installation orientation. If interference is caused in all orientations, install an interference blanker plate on top of the connector. Contact your agent if an interference blanker plate is required.
 - 5 Note that a special type of DIN connector is required. The DIN connector is not interchangeable with the one for the SA type solenoid valve.
 - 6 If you cannot remove the DIN connector when wiring, remove the switch installation bolts and then remove the DIN connector. The tightening torque for the installation bolts is 3.6 to 5.1 ft lbs.

Understanding Model Numbers

Connectors

Model No.	Power supply specification	Wiring	Electrical Circuit Diagram
BRC41-01WD2	D2	⊙When signal input device (load) remote common is plus OW Terminal 1 is connected to load, while Terminals 2 and 3 are connected to power (Terminal 2 to +). 	Normal open type with indicator  Pressure increase causes indicator to light. Circuit closed (ON) Pressure decrease causes indicator to go out. Circuit open (OFF)
		⊙When signal input device (load) common is minus OW Terminal 1 is connected to load, while Terminals 2 and 3 are connected to power (Terminal 2 to -). 	
BRC41-01WC2	C2	⊙When signal input device (load) is AC OW Terminal 1 is connected to load, while Terminals 2 and 3 are connected to power (Terminal 2 is nonpolar). 	Normal open type with indicator  Pressure increase causes indicator to light. Circuit closed (ON) Pressure decrease causes indicator to go out. Circuit open (OFF)

Note: 1. The DIN connector wiring connector port size is PG11.
 2. The compatible cable diameter for the DIN connector is $\phi 8$ to $\phi 10$. Dust resistance and water resistance is lost for any cable outside this range.
 3. The connector can be installed in different orientations are 90-degree increments by changing the orientation of the terminal block.
 4. The connector is designed so the cover cannot be removed unless the installation screws are removed.
 5. Use M3 for round type and Y type solderless terminals.
 6. The tightening torque of M3 screws used for securing connectors and for terminals is 42 to 70 in lbs.

• Handling

- 1 In a 03 size application where control differential pressure is large, use of an H type makes adjustment easier.
- 2 Note that a sub plate and installation bolts are not included. See pages H4 and F87-89 if these items are required.
- 3 O4 series modular valves do not have an L (DR2) drain port, so they cannot be used in combination with pressure center type solenoid valves (D).

Flow Control Modular Valve (Pressure and temperature compensated)

5.2 to 52.8 gpm
3045, 3625, 5075 psi

Features

This modular valve is used to control actuator speed and for other flow control valve applications.

A wide range of models are available for A and B port control, A or B port control, and

P port control.

A pressure compensation mechanism ensures that the control flow rate does not change, even when there is pressure fluctuation.

The control flow rate remains stable, even when fluid temperature changes. Maximum Operating Pressure: 3045, 3625, 5075 psi

Specifications

Model No.	Nominal Diameter (Size)	Maximum Working Pressure psi	Control Flow Rate gpm	Check Valve Cracking pressure psi	Weight lbs	Gasket Surface Dimensions

					22.4	

• Handling

- For flow rate control, make sure that the pressure differential between the input port and output port is at least 145 psi. See the Flow Rate - Minimum Differential Pressure Characteristics for information about the OCF-G01 and OFF-G04 maximum control flow rate.
- The control flow rate is increased by

counter clockwise (leftward) rotation of the flow rate control knob.
3 Pressure rate control knob rotation resistance will increase as the pressure increases. However, do not use a spanner or other tool that fits around the knob to turn it. Instead, insert a 5mm hex spanner into the hex hole in the

- center of the knob and rotate it that way.
- After adjusting the flow rate, fix it in place by turning the lock screw on the end of the knob to the right.
- Note that a sub plate and installation bolts are not included. See pages H4 and F87-89 if these items are required.
- 04 series modular valves do not have an L (DR2) drain port, so they cannot be used in combination with pressure center type solenoid valves (D).
- Flow rate fluctuation is $\pm 5\%$ within the temperature range of 68°F to 140°F.

Check Modular Valve

13.2 to 79.2 gpm
3625, 5075 psi

Features

This modular valve is a check valve that prevents reverse-flow.

The 01, 03, 04 sizes include types that can also be used as suction and differential circuits.

Maximum Operating Pressure: 3625, 5075 psi

Specifications

Model No.	Nominal Diameter (Size)	Maximum Working Pressure psi	Maximum Flow Rate gpm	Cracking pressure psi	Weight lbs	Gasket Surface Dimensions

• Handling

- Differential circuit can be easily configured at P → B by attaching OC-G**-A* above the OC-G**-AP* on the subplate. (See the figure to the right.)
- Note that a sub plate and installation bolts are not included. See pages H4 and F87-89 if these items are required.

3 04 series modular valves do not have an L (DR2) drain port, so they cannot be used in combination with pressure center type solenoid valves (D).

Pilot Operated Check Modular Valve

13.2 to 79.2 gpm
3625 to 5075 psi

Features

This modular valve is used to prevent actuator self-running and to maintain actuator position.

Maximum Operating Pressure: 3625, 5075 psi

Specifications

Model No.	Nominal Diameter (Size)	Maximum Working Pressure psi	Maximum Flow Rate gpm	Cracking pressure psi	Area Ratio			Weight lbs	Gasket Surface Dimensions

• Handling

- Note that when the O1 size has the auxiliary symbol "F," tank port back pressure can cause the small valve to open, making it impossible to maintain pressure.
- If tank port back pressure causes the small valve to open and make it impossible to maintain pressure with the

03, 04 size, use a direct type with auxiliary symbol "D."

- Minimum pilot pressure fluctuates with the input side pressure during reverse flow. Operate the valve so pressure is at least twice as high as the required pressure obtained using the minimum pilot pressure characteristics graph.

4 Note that a sub plate and installation bolts are not included. See pages H4 and F87-89 if these items are required.

5 O4 series modular valves do not have an L (DR2) drain port, so they cannot be used in combination with pressure center type solenoid valves (D).

Gauge Modular Block

13.2 to 26.4 gpm
3625 psi

Features

This modular block makes it possible to attach a pressure gauge to the P and T ports or the A and B ports.

Connection to the ports is extremely simple.

Specifications

Model No.	Nominal Diameter (Size)	Maximum Working Pressure psi	Maximum Flow Rate gpm	Weight lbs	Gasket Surface Dimensions
OK-G01-P-E20 OK-G01-T-E20	1/8	3625	13.2	1.3	ISO 4401-03-02-0-94

Understanding Model Numbers

OK - G 01 - P - (H) - 20

• Handling

- 1 When installing the OK-G01-P- (H)-E20, OK-G01-T-(H)-E20, or OK-G01-W-(H)-E20, make sure the model number printing is oriented so it can be read correctly from the P port side.
- 2 Note that a sub plate and installation bolts are not included. See pages H4 and F87-89 if these items are required.

High-Low System Block

13.2 to 26.4 gpm
3625 psi

Features

Simple high-low 2-speed control can be attained by stacking this block on top of a high-low base block and manifold, which configures a speed control circuit.

Specifications

Model No.	Nominal Diameter (Size)	Maximum Working Pressure psi	Maximum Flow Rate gpm	Weight lbs
OB-G01-W-20	1/8	3625	13.2	3.3
OB-G01-W-H-20				5.5
OB-G03-W-J30	3/8	3625	26.4	9.9
OB-G03-W-H-J30				15.6

• Handling

- If a base block is required, use MOB-01Y-W*-10 for the 01 size and MOB-03X-B*-J30 for the 03 size, because their valve pitches match. MOB-01X-B*-10 has a different valve pitch, and so cannot be used.
- When installing this block, make sure the nameplate is oriented so it can be read correctly from the A port side.
- Both of the cylinder ports on this block's manifold side (bottom) are open. Because of this, close one of the base block cylinder ports (A1, B1 or A2, B2 on the next page), or modify the manifold so it has a single cylinder port only.
- Note that installation bolts are not included. See pages H4 and F87-89 if these items are required.

Understanding Model Numbers

End Plate, Free Flow Plate, 03/01 Change Plate

13.2 to 26.4 gpm
3625 psi

Features

The end plate is a modular valve plate used to close off a circuit that is not required, and when using a relief modular valve in a standalone configuration. The free flow plate is a modular valve

plate is used in a one-way circuit that does not require a solenoid valve. The 03/01 change plate makes it possible to use an 01 size modular valve with an 03 size sub-plate and base block.

The 06/04 change plate makes it possible to use an 04 size modular valve with an 06 size sub-plate and base block.

High-pressure M35 Series

13 to 80 gpm
5075 psi

Overview

The High-Pressure M35 Series responds to the needs of high density in a variety of fields by enabling higher density hydraulic systems.

This valve incorporates NACHI original flow control technology and heat

treatment, plus precision machining to create high-performance valves with the following features:

- High-pressure 35MPa
- High reliability and compact design

- Press Machinery
Press brakes, punching presses
 - Underground Machinery
Shield tunneling machinery, removal systems, etc.
 - Construction Machinery
From mini vehicles to 6 to 10-ton vehicles, shovels, etc.
 - Environmental Related
Granulators, filter presses, scrap presses
 - Testing Equipment
Impulse, durability, performance testers, etc.
- (For details see catalog number 9265-3.)

- M35 Series Modular Valve (O * H)
By integrating multiple hydraulic devices, this valve can be used when configuring hydraulic circuits even in the high-pressure range. See page F9 for information about the O4 size.

This series consists of pressure, flow rate, and flow direction control valves.
Maximum Working Pressure: 5075 psi
Maximum Flow Rate: to 80 gpm

- M35 Series Non-leak Solenoid Valve (SNH)
A NACHI original structure is used to configure this wettype shutoff valve that isolates internal leaks. Installation conforms to ISO4401 standards, so it can be used in a wide range of applications in combination with modular valves. For more information, see page D-53.
Maximum Working Pressure: 5075 psi
Maximum Flow Rate: to 25 gpm

- M35 Series Related Components
 - Pump (See page A-42.)
Rated Pressure: 5075 psi
Capacity: 1.7 to 2.4 cu in/rev
 - High-response proportional flow control valve
Maximum Working Pressure: 5075 psi
Maximum Flow Rate: to 90 gpm
- M35 Series Industry Specific Components
 - Jack Valve
Maximum Working Pressure: 5075 psi
Maximum Flow Rate: to 25 gpm
 - Logic Cartridge Mono Block
Maximum Working Pressure: 5075 psi
Maximum Flow Rate: to 1850 gpm
- M35 Series Industry Specific Components
 - Hydraulic accessories (stop valves, filters, accumulators, hoses, etc.);
NACHI-MOOG servo level

Specifications

M35 Series Modular Valve

Size	Maximum Working Pressure psi	Maximum Flow Rate gpm	Number of Integration Levels
01	5075	13.2	to 3
03		26.4	
04		79.2	

Dimensions

Size	Height (mm)	Width (mm)	Remarks
01	40	46	Same dimensions as the M25 Series
03	55	70	
04	70	91	

Note: M8 installation bolts only are used for the 03 size.

Modular Valve Product Series

01, 03 Size Specifications

		Valve Model Number	Maximum Operating Power psi	Maximum Flow Rate gpm	Pressure Adjustment Range (Cracking Pressure) psi	ISO Symbol
Solenoid Valves	Solenoid Valves	SA-G***-**-31(21) SS-G***-**-31(22)	5075			
Pressure Control Valves	Relief Valves (Balance Type)	ORH-G01-P*-10 -W*-		G01 10.5	500 - 3625 1000 - 5075	
		ORH-G03-P*-10 -W*-		G03 21.1	P: P (→T) port W: AB (→T) port	
	Relief Valves (Direct Type)	ORH-G01-DW*-10 -DA*- -DB*-		G01 5.2	500 - 3625 1000 - 5075	
		ORH-G03-DW*-10 -DA*- -DB*-		G03 7.9	DW: AB (→T) port DA: A (→T) port DB: B (→T) port	
	Reducing Valve	OGH-G01-P*-10 -B*-		G01 10.5	500 - 3625	
		OGH-G03-P*-(B)-10 -B*-		G03 21.1	P: P port B: B port	
Flow Control Valves	Flow Regulator Valves	OYH-G01-W-Y-10 -A-Y- -B-Y- -W-X- -A-X- -B-X-		G01 13.2	Y: Meter out X: Meter in W: AB port A: A port B: B port	
		OYH-G03-W-Y-10 -A-Y- -B-Y- -W-X- -A-X- -B-X-		G03 26.4		
Direction Control Valves	Check Valves	OCH-G01-P*-10 -T*-		G01 13.2	1: 5.8 2: 50.7 3: 72.5	
		OCH-G03-P*-10 -T*-		G03 26.4	P: P port T: T port	
	Pilot Check Valves	OPH-G01-W*-(F)-10 -A*- -B*- OPH-G03-W*-(D)-10 -A*- -B*-		G01 13.2 G03 26.4	1: 29 2: 72.5 W: AB port A: A port B: B port D: Direct type (no small valve, G03 only) F: Decomp type (with small valve, G01 only)	

ORH : Relief valve

OGH : Reducing valve

OPH : Pilot check valve
