

# PFE1100-12-054xD

## DC-DC Front-End Power Supply

The PFE1100-12-054xD is a 1100 watt DC to DC power supply that converts DC input into a main output of 12 VDC for powering intermediate bus architectures (IBA) in high performance and reliability servers, routers, and network switches.

The PFE1100-12-054xD meets international safety standards and displays the CE-Mark for the European Low Voltage Directive (LVD).

### Key Features & Benefits

- Best-in-class, 80 PLUS certified “Platinum” efficiency
- Best-in-class, “Platinum level” efficiency
- Wide input voltage range: 40 – 72 VDC
- Always-On 16.5 W programmable standby output (3.3 / 5 V)
- Hot-plug capable
- Parallel operation with active digital current sharing
- High density design: 25.6 W/in<sup>3</sup>
- Small form factor: 321.5 x 54.5 x 40 mm (12.66 x 2.14 x 1.57 in)
- I<sup>2</sup>C communication interface for control, programming and monitoring with PSMI and Power Management Bus protocol
- Overtemperature, output overvoltage and overcurrent protection
- 256 Bytes of EEPROM for user information
- 2 Status LEDs: IN OK and OUT OK with fault signaling

### Applications

- High Performance Servers
- Routers
- Switches

## 4. SIGNAL & CONTROL SPECIFICATIONS

### 4.1 FRONT LEDES

OPERATING CONDITION	LED SIGNALING
<b>IN LED (INPUT OK)</b>	
DC Line within range	Solid Green
DC Line UV condition	Off
Redundant Operation - PSU1 operating and PSU2 has input power removed	Solid Yellow (PSU2) <sup>1</sup>
<b>OUT LED <sup>2</sup> (OUTPUT OK)</b>	
PSON High	Blinking Yellow (1:1)
Hot-Standby Mode	Blinking Yellow/Green (1:2)
$V_1$ or $V_{SB}$ out of regulation	
Over temperature shutdown	
Output over voltage shutdown ( $V_1$ or $V_{SB}$ )	Solid Yellow
Output over current shutdown ( $V_1$ or $V_{SB}$ )	
Fan error (>15%)	
Over temperature warning	Blinking Yellow/Green (2:1)
Minor fan regulation error (>5%, <15%)	Blinking Yellow/Green (1:1)
Redundant Operation - PSU1 operating and PSU2 has input power removed	Off (PSU2)

<sup>1</sup> The LEDs will be ON till input power from PSU1 is removed.

<sup>2</sup> The order of the criteria in the table corresponds to the testing precedence in the controller.

Table 1. LED Status

The front-end has 2 front LEDs showing the status of the supply. LED number one is green and indicates DC power is on or off, while LED number two is bi-colored: green and yellow, and indicates DC power presence or fault situations. For the position of the LEDs see Figure 5.

### 4.2 GRAPHICAL USER INTERFACE

The Bel Power Solutions provides with its “I<sup>2</sup>C Utility” a Windows® XP/Vista/Win7 compatible graphical user interface allowing the programming and monitoring of the PFE1100-12-054xD Front-End.

The utility can be downloaded on [www.belpowersolutions.com](http://www.belpowersolutions.com) and supports both the PSM1 and Power Management Bus protocols.

The GUI allows automatic discovery of the units connected to the communication bus and will show them in the navigation tree. In the monitoring view the power supply can be controlled and monitored.

If the GUI is used in conjunction with the PFE1100-12-054xD Evaluation Kit it is also possible to control the PSON pin(s) of the power supply.

Further there is a button to disable the internal fan for approximately 5 seconds (not implemented yet). This allows the user to take input power measurements without fan consumptions to check efficiency compliance to the Climate Saver Computing Platinum specification.

Figure 2. I2C Bus to uC (Graphical User Interface)

The monitoring screen also allows to enable the hot-standby mode on the power supply. The mode status is monitored and by changing the load current it can be monitored when the power supply is being disabled for further energy savings. This obviously requires 2 power supplies being operated as a redundant system (like the evaluation kit).

**NOTE:** The user of the GUI needs to ensure that only one of the power supplies have the hot-standby mode enabled.

## 5. ELECTROMAGNETIC COMPATIBILITY

**NOTE:** Meets the EMC requirements according to EN IEC 61204-3/2018 and according to EN 55035/2017.

## 10. APPENDIX

### 10.1 SOCKET CRIMPING OPERATION INSTRUCTION (DP5TJY0300-001)

#### I. CRIMPING TOOLS AND MACHINE PREPARATION

Machine needed before crimping: Terminal Crimping Machine, Crimping Mould, Crimping Tools, Wire Strippers, Utility Knife and Wrench.

- NOTES:** 1.Crimping tool need to install onto crimping mould, and crimping mould need to fix onto crimping machine.  
 2. Two factors must be considered during the design of crimping mould:  
 A: must meet dimensions of tools installation.  
 B: Easy to install in machine and be in machine effective itinerary

NAME	SUPPLIER	PART NUMBER
Terminal Crimping Machine	JonHon Optronic	THB Terminal Crimping Machine
Crimping Mould	JonHon Optronic	12A-01
Crimping tools	JonHon Optronic	YJD-DP5

Crimping tools YJD-DP5 including 4 parts: 4U-A5881-1, 4U-A5881-2, 4D-A5881-1, 4D-A5881-2. (See picture 1)

Table 1. A Set of Machine Recommended

#### II. CRIMPING MACHINE AND TOOLS INSTALLATION

Crimping mould and crimping tools must be installed well before crimping.

**Install Requirements:**

1. Up tools 4U-A5881-1 and 4U-A5881-2 need install in dynamic mould. Down Tools 4D-A5881-1 and 4D-A5881-2 need install in static mould. (See picture 2)
2. 4 pieces crimping tools can divided into 2 pairs: 4U-A5881-1 mated with 4D-A5881-1, which is crimping cable jacket. 4U-A5881-2 match 4D-A5881-2, which is crimping cable core.
3. Up tool 4U-A5881-1 has U-shaped hole. Customer can adjust the install position according to wire thickness, which to make sure the wire jacket and core will be crimping tightly. Tool 4D-A5881-1 need to install outside of crimping mould, in order to adjust tool 4U-A5881-1. (Reference at Picture 2)

### III. CRIMPING

1. **Wire Cutting:** Cutting wire with required length, and the wire can be used 8AWG American standard wire or other 8mm<sup>2</sup> wire.
2. **Wire Stripping:** Stripping the wire jacket 8±1mm with Wire Strippers, and cutting the jacket straight with Utility Knife. The wire should be at the set of bundles after stripping, shown as Picture 3.

Picture 3. The wire stripped

Picture 4. Wire and Terminal before Crimping

3. **Crimping:** Placing the wire and the terminal shown as picture 4, and placing them into the gap between up tool and down tool shown as picture 5.

Picture 5. Position before Crimping

Picture 6. Position after crimped

4. Start the terminal crimping machine, and crimping closed shown as picture 6.
5. **Test after Crimping**
  - a) **Appearance Inspection:** The crimped position should be smooth and firm. (reference see picture 7)

Picture 7.

If the severe deformation after crimping, we need to adjust the machine knob to adjust the crimping mould and distance between up tool and down tool, which to ensure the crimp the wire correctly and beautifully. Meanwhile, we need to avoid too much crimping strength so as to short the tools life, or even to damage the tools.

- b) **Pulling-Out Force Test:** When the first batch after a terminal crimping, crimp pull out force should be inspected
  - Test Method:** Fixed the terminal and Non-crimped wire onto ends of tension meter, and then gradually increase the tension until the wire is pulled and separated from the terminal, and read the tension meter reading is to pull off the greatest force.
  - Qualification Criterion:** When the pull-out force meets the requirements of Table 2, and then can show pull-out force is qualified.
  - Failure Treatment:** When the pull-out force failed, we need to adjust the machine knob to adjust the crimping mould and distance between up tool and down tool, and then re-crimp until the test qualified. After that, we can make mass production.

CABLE SIZE	CORE CROSS-SECTIONAL AREA	PULL-OUT FORCE
8 AWG	8.5 mm <sup>2</sup>	950 N
10 AWG	5.5 mm <sup>2</sup>	650 N

Table 2. Pull-Out Force Table

**NOTE:** Mid-value clustering Method will be used if core cross-sectional area is not in the range of Table 2

#### IV. TREATMENT AFTER CRIMPING

Crimping tools, crimping mould should be removed from crimping machine and properly kept after crimping work.
