(5) RESISTANCE VALUE

1 Ω to 100M Ω

(6) Default Code

Letter L is system default code for order only (NOTE)

MARKING

RC0805

Fig.1 Value = 10k Ω

5% E-24 series: 3 digits

First two digits for significant figure and 3rd digit for number of zeros.

Fig.2 Value = 10K Ω

Both 1% E-24 and E-96 series: 4 digits

First three digits for significant figure and 4th digit for number of zeros.

CONSTRUCTION

The resistors are constructed out of a high-grade ceramic body. Internal metal electrodes are added at each end and connected by a resistive material. The composition of the resistive material is adjusted to give the approximate required resistance and laser cutting of this resistive layer that achieves tolerance trims the value. The resistive layer is covered with a protective coat and printed with the resistance value. Finally, the two external terminations are added. See fig.3

Note

1. All our RSMD products meet RoHS compliant and Halogen Free. "LFP" of the internal 2D reel label mentions "Lead Free Process".
2. On customized label, "LFP" or specific symbol can be printed

RATED VOLTAGE:

The DC or AC (rms) continuous working voltage corresponding to the rated power is determined by the following formula:

$$V = \sqrt{P \cdot R}$$

Where

V=Continuous rated DC

or AC (rms) working voltage

P=Rated power

R=Resistance value
